

Project Management:

Scrum Artifacts

The Scrum framework outlines three key artifacts that showcase the work of the Scrum team and the value they generate. These artifacts serve to increase transparency and are accessible to all members of the organization.

Each artifact is accompanied by a commitment that serves to bolster transparency, clarify expectations for all involved parties, and facilitate the inspection and adoption of the artifact. Essentially, these commitments aid both the team and stakeholders in embodying Scrum values and embracing agile principles.

Product Backlog

Sprint Backlog

Increment

Artifact	Owned by	Purpose	Used for	Commitment
Product backlog	The product owner	A single source of truth for everyone to identify what needs to be built and why	Sprint planning and creating a sprint backlog	Product goal
Sprint backlog	The development team	To create transparency on what and how the team will build in the next sprint, and why it is valuable	Developing the increment and increasing trust and transparency	Sprint goal
Product increment	The scrum team	“Working software is the primary measure of progress”	Value added to the product created during the sprint	Definition of done
